Pet Adoption

Introduction

The code contains different types of functions,
restoring, adding, updating info about pets
(I made it in one code and i will use it in online
compiler)

Background Project

Current scenario:

Every function has its specific feature i am going in to tell about them in more details in readme.

But here let's break down consistence of functions in briefly

Functions of codes in two words

Add Function

Mostly used just string to
restore the information we
get

Remove function

We used .remove command
so it removes profiles of pets

List of pets
Just used if conditions
that shows profiles

*Okay, let's move on to
readme to break it down
totally*
